

Problem – Solution Fit

Date	10 Jun 2026
Team ID	
Project Name	OptiCrop
Maximum Marks	2 Marks

1. CUSTOMER SEGMENT CS - Smallholder farming communities seeking predictive yield confidence. - Agricultural extension officers evaluating soil plots.	5. CUSTOMER CONSTRAINTS CC - Lack of local access to chemical testing facilities. - Minimal exposure to complex data analytics environments.	6. AVAILABLE SOLUTIONS AS - Traditional local crop rotation heuristics. - Delayed laboratory sample dispatch analysis.
2. JOBS-TO-BE-DONE JP - Selecting highly aligned crops prior to seasonal seeding. - Mitigating crop failure overhead and expenditure risks.	4. PROBLEM ROOT CAUSES RC - Unseen shifts in environmental nutrient ratios (N-P-K). - Volatile microclimates defying historical parameters.	7. BEHAVIOUR BE - Relying heavily on legacy peer suggestions during purchases. - Treating soil fields uniformly across entire zones.
3. THINKING TR "Will this season's crop survive current conditions?" "Is my mineral ratio optimal for standard growth?"	9. YOUR SOLUTION SL OptiCrop: A real-time ML processing pipeline mapping N-P-K and pH inputs to crop recommendations.	8. CHANNELS OF BEHAVIOUR CH - Lightweight cloud web portal implementations. - Localized agricultural cooperative kiosks.
10. EMOTIONS: BEFORE / AFTER EM Before: Anxious about capital investment risk. After: Validated and structurally reassured.
