

Demonstration of Proposed Features

Date	1 Jul 2026
Team ID	XXXXXX
Project Name	OptiCrop
Maximum Marks	1 Mark

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	User Input Form	Allows users to enter soil and environmental parameters such as Nitrogen, Phosphorous, Potassium, temperature, humidity, pH, and rainfall.	Implemented	Yes	Successfully accepts user input through the web interface.
2	Data Preprocessing	Processes and validates the input data before passing it to the machine learning model.	Implemented	Yes	Input data is prepared for accurate prediction.
3	Crop Recommendation Model	Predicts the most suitable crop using the trained Scikit-learn model.	Implemented	Yes	Generates crop recommendations based on user input.
4	Flask Web Application	Integrates the frontend, backend, and machine learning model into a single application.	Implemented	Yes	Application runs successfully on the local Flask server.
5	Prediction Result Display	Displays the recommended crop on the result page after prediction.	Implemented	Yes	Results are shown immediately after user submission.
6	GitHub Repository Management	Maintains the project source code using Git and GitHub for version control and collaboration.	Implemented	Yes	Repository updated with project files and documentation.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
